Education

University at Buffalo — Buffalo, NY
B.S. in Computer Science, Concentration in Software Systems — *Expected Graduation, May 2028*

Relevant Coursework: Object-Oriented Programming, Data Structures & Algorithms, Systems Programming, Computer Organization, Distributed Systems, Linear Algebra

Technical Skills

Languages: C++, C, Go, Python, TypeScript, SQL
Frameworks & Libraries: React, Node.js, Express.js
Databases & Developer Tools: PostgreSQL, Git, GitHub

Experience

Pinterest — Palo Alto, CA
Incoming Software Engineer Intern — *May 2027 - August 2027*

- Incoming on Pinterest's Backend Platform team.

University at Buffalo Society of Automotive Engineers — Buffalo, NY
Embedded Software Engineer — *September 2026 - Present*

- Designed and developed modular, object-oriented **C++** firmware for an ESP32-based automotive telemetry system integrating **10 sensor units** across temperature, GPS, IMU, suspension, and drivetrain monitoring.
- Implemented interrupt-driven RPM measurement using Hall-effect sensors, incorporating pulse-period validation, debouncing, and a **20-sample moving average** for CVT drivetrain monitoring.
- Engineered a multi-sensor data acquisition and logging pipeline using **5 hardware interfaces** (I2C, SPI, UART, ADC, and GPIO interrupts), recording **20 telemetry fields** to SD card with configurable temperature anomaly detection.

Liberty Mutual — Plano, TX
Software Engineer Intern — *June 2026 - August 2026*

- Delivered live voice-to-voice call translation in under **2s** end-to-end by building a bidirectional WebSocket pipeline (speech-to-text, machine translation, text-to-speech) plus auto-translated English-Spanish chat for **300+** support agents, on a Node.js, Express, and TypeScript backend.
- Helped agents catch misheard technical terms on live calls by building **sub-500 ms** captioning that scores each phrase's confidence and flags uncertain ones for verification.
- Cut ticket logging time **70%** by shipping a LangChain pipeline that summarizes support call transcripts with an LLM, auto-redacts customer PII, and posts notes to ServiceNow through its REST API.
- Benchmarked **3,000+** requests at **100%** success, under **850 ms** median translation latency, and **14–15 ms** REST response times.

Zof AI — Remote
Software Engineer Intern — *June 2025 - September 2025*

- Designed and shipped **20+** production webpages for Zof's AI verification and control platform, serving **500+** business clients reviewing AI changes before production.
- Built dashboards surfacing verification results, system impact, and approval status, cutting dashboard load time by **35%** and time to assess a change by **40%**.
- Created **25+** reusable, type-safe React/TypeScript components for evidence and audit views, reducing duplicate UI code by **40%** across the platform.

Projects

Blockchain Fee & Price Automation | *Python, Selenium, Beautiful Soup*

- Built a Python tool that scraped fees and timestamps for ∼**4,250 unique transactions** across Solana, Polygon, and Tron explorers, using Selenium with automatic restarts and retries.
- Converted **915 Tron fees ($2.1K)** to USD using daily historical CoinGecko prices, caching by date to cut API calls by ∼**90%**.

Activities and Leadership

University at Buffalo Association for Computing Machinery — Buffalo, NY
Vice President — *August 2026 - Present*

- Organize **10** technical and career events for a **609-member** chapter to support member engagement
- Support outreach efforts, growing chapter membership from **500 to 609**, a **22%** increase
